

Act as a **Google Apps Script dashboard expert**.

Your tasks:

1. Analyze the dataset and recommend suitable charts.
2. Build a **fully working interactive dashboard** as a **Google Apps Script Web App** using **Google Charts** and **Bootstrap**.

Requirements:

- Use the **bound script method**
- Separate files:
 - Code.gs, Index.html, JavaScript.html, css.html
- Use a server-side include() function
- Normalize all data **on the server side** (dates, numbers, booleans)
- Ensure charts load correctly without silent errors

Output:

- Brief chart explanation
- Complete working code
- Simple deployment steps for a non-technical user
